**SPECIALISTS
IN HORTICULTURE
LIGHTING**

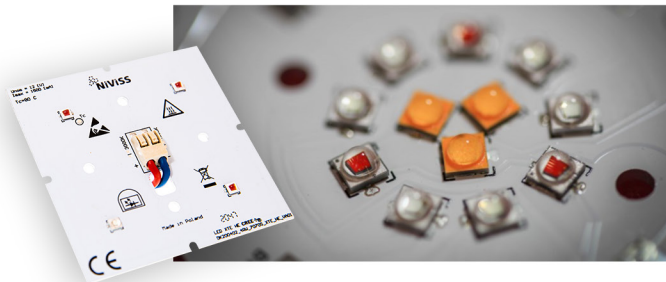

The modules we offer have various shapes and sizes, according to customer requirements. We offer LED modules for horticulture that perfectly fit the demands. Our solutions facilitate maximizing of plant production and the reduction of power consumption. In our products we use LEDs, which are the most energy efficient solution available. Mixing LEDs of different colours we can achieve required light spectra dedicated for each species and stage of growth.

Our goal is to provide the highest quality and reliability – we achieve that by:

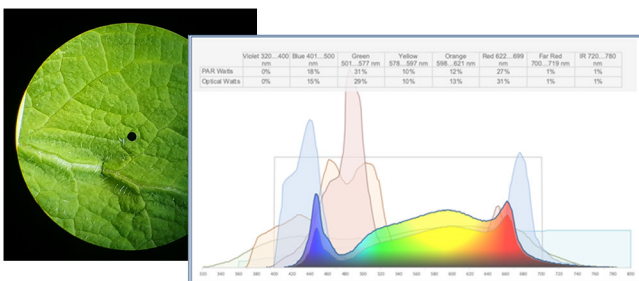

- using only high quality components,
- employing experienced and qualified design engineers,

Niviss offers wide range of Horticulture LED modules with various shapes and sizes, according to customer requirements.

Our experienced R&D team can select special configurations of LEDs to develop optimal wavelength spectrum adjusted to application requirements.

We offer a wide range of LED secondary optics that could be used depending on the environment in which the product is said to operate. Project can base on optic solutions from Ledil, Khatod, Ledlink, Carclo or many more.

Power supplies and power sources are selected in accordance with the requirements of our customers.
